2.)

- HTTPS/SSL Update means upgrading a website from an unsecured connection ([http](#)) to a secured and encrypted connection ([https](#)) using an SSL certificate.
- SSL stands for: (**Secure Sockets Layer**)

It is a security technology that encrypts the data between:

- the user
- and the website

So hackers cannot easily steal information like:

- passwords
- card details
- personal data
- login information
- HTTPS stands for (HyperText Transfer Protocol Secure) { This means the website is running with SSL security}

3.)

1. Google chrome
2. Safari
3. Microsoft edge
4. Morilla firefox
5. Opera
6. Samsung internet
7. Brave
8. UC browser
9. Vivaldi
10. Tor browser

4.) **Create a Customer Persona & identify Brand Details for the given brands.**

Solution : Meet vaghela : Brand analysis
